Hypnose et suggestion (Book, 1989) [WorldCat.org]

There is already some evidence that targeted hypnotic suggestion could be viable to improve cognition following acquired brain injury. Sullivan et al. found that a single hypnotic suggestion caused superior improvement in performance on one of two cognitive outcome measures as compared to a relaxation control intervention. The effect was positive but clinically irrelevant [standardized mean difference (SMD) = 0.18], possibly due to the short single-session suggestion offered to the patients.

Hypnosis is a human condition involving focused attention, reduced peripheral awareness, and an enhanced capacity to respond to suggestion.. There are competing theories explaining hypnosis and related phenomena. Altered state theories see hypnosis as an altered state of mind or trance, marked by a level of awareness different from the ordinary state of consciousness.
