Bees In Decline Greenpeace

Bees and other pollinators – both in the wild, and managed – seem to be declining globally, particularly in North America and Europe. In recent winters, honeybee colony mortality in Europe has averaged around 20%. No single factor can be blamed for the overall global decline in bee populations, or in their overall health.

Bees In Decline Greenpeace

Greenpeace has recently published a review of the factors thought to be contributing to the marked decline in honey bee and wild pollinator populations (Tirado et al. 2013). As the report Bees in Decline makes clear, the observed overall global decline in bee populations and in their health cannot be attributed to any single factor. Much of the work

THE BEES' BURDEN - greenpeace.to

The most significant threat to bees and other insects is the loss of their natural habitat. Bees and other pollinators rely on wildflower meadows for food and shelter, but since 1945 the UK has lost a staggering 97% of these areas. Intensive farming has removed many of these meadows, along with other wildlife-friendly features such as hedgerows, water meadows and ponds.

Bees | Greenpeace UK

Typically, a bee hive or colony will

decline by 5-10 percent over the winter, and replace those lost bees in the spring. In a bad year, a bee colony might lose 15-20 percent of its bees. In the U.S., winter losses have commonly reached 30-50 percent, in some cases more.
