Nonlinear Inverse Problems In Imaging

An inverse problem in
 science is the process
 of calculating from a
 set of observations the
 causal factors that
 produced them: for
 example, calculating
 an image in X-ray
 computed tomography,
 source reconstruction
 in acoustics, or
 calculating the density
 of the Earth from
 measurements of its
 gravity field. It is called
 an inverse problem
 because it starts with
 the effects and then
 calculates the causes.

It is the inverse of a forward problem, which starts with the causes and then calculates the effect
