Hazard Characterization For

Pathogens In

Overview. Hazard characterization, either as part of a microbiological risk assessment or as a stand-alone process, describes the human adverse health effects that may result from ingestion of pathogenic microorganisms. Ideally, it will include quantitative information in terms of a dose-response relation and the probability of adverse outcomes. This volume provides guidelines for the characterization of hazards in food and water using a structured, six-step approach, involving description ...

WHO | Hazard characterization for pathogens in food and water

Hazard characterization for pathogens in food and water. These guidelines have been written for an informed audience,

and may be used in different contexts. In an international context, the guidelines will provide guidance for hazard characterizations conducted by the Ad hoc Joint Expert Meetings on Microbiological Risk Assessment and in the development of the WHO Guidelines for Drinking Water Quality (GDWQ).

WHO | Hazard characterization for pathogens in food and ...

Hazard characterization describes the nature and probability of adverse human effects as a function of viable pathogen numbers ingested [10,28]. Health consequences are greatly affected by the physiological and immunological status of the host as well as the nature of the pathogen.

Hazard characterization for pathogens in food and water ...

Hazard characterizations can be conducted as stand-alone processes or as component of risk assessment. A hazard characterization for a particular pathogen may serve as a common module or building block for risk assessments conducted for a variety of purposes and in an assortment of commodities. A hazard characterization developed in one country may serve the needs of risk managers in another country when combined with an

exposure assessment specific to that country.
