SLAM (Simultaneous Localization And Mapping)

Simultaneous Localization And Mapping For

In computational geometry and robotics, simultaneous localization and mapping (SLAM) is the computational problem of constructing or updating a map of an unknown environment while

simultaneously keeping track of an agent's location within it. While this initially appears to be a chicken-and-egg problem there are several algorithms known for solving it, at least approximately, in tractable time ...

Simultaneous localization and mapping - Wikipedia

Instead they rely on what's known as simultaneous localization and mapping, or SLAM, to discover and map their surroundings. Using SLAM, robots build their own maps as they go. It lets them know their position by aligning the sensor data they collect with whatever sensor data they've already collected to build out a map for navigation.
