The chemical reaction involved in acid-base titration is known as neutralisation reaction. It involves the combination of H 3 O + ions with OH - ions to form water. In acid-base titrations, solutions of alkali are titrated against standard acid solutions. The estimation of an alkali solution using a standard acid solution is called acidimetry.

Acid Base Titration - Amrita Vishwa Vidyapeetham Virtual Lab

In an acid-base titration, the desired level is when the amounts of acid and base are stoichiometrically equivalent to each other (the equivalence point). This can be determined using an appropriate acid-base indicator or by monitoring the pH over the course of the addition of titrant and analyzing the resulting titration curve.

Experiment 10 Titration Curves

An acid-base titration is a quantitative analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual indicators, pH electrodes, or both. The reaction’s equivalence point is the point at which the titrant has exactly neutralized the acid or base in the unknown analyte; if you know the volume and concentration of the titrant at the equivalence point, you can ...
