By default, a color image is stored by MATLAB using 3 matrices, each representing red, green and blue components of pixels. In image/video processing, it is also referred to as R/G/B channels. A matrix is essentially an array indexed by two indexing variables typically for row and column. Each of the three color matrices can be specified by the third indexing number -- note the number 1 in the example below `img(:, :, 1)`, and so on.
