Theorem 1

(Factorization, Fisher-Neyman Theorem) In a regular model, a statistic $T(X)$ is sufficient in $\theta \Leftrightarrow p(x, \theta) = g(T(x), \theta)h(x), \forall x \in R$ and $\theta \in \Theta$ for some functions $g(t, \theta)$ and h . Statistical modeling is the process of applying statistical analysis to a dataset. A statistical model is a mathematical representation (or mathematical model) of observed data.

When data analysts apply various statistical models to the data they are investigating, they are able to

understand and interpret the information more strategically.
