Chapter 5: Cell Growth and Division Flashcards | Quizlet

Figure 3.5.3 – Cell Division: Mitosis Followed by Cytokinesis: The stages of cell division oversee the separation of identical genetic material into two new nuclei, followed by the division of the cytoplasm. Prophase is the first phase of mitosis, during which the loosely packed chromatin coils and condenses into visible chromosomes. During prophase,

each chromosome becomes visible with its identical partner attached, forming the familiar X-shape of sister chromatids.

Play this game to review Cell Structure.

Scientists searching for new anticancer drugs treat a cell culture with a certain compound. Following treatment, they notice that the culture has stopped growing. Untreated cells from the same

culture, however, have continued to grow. These results could indicate that the compound blocks the normal cell cycle.
