Most modern search engines offer
 features like storage and data
 manipulation logic. At the same time,
 most databases offer some sort of text-
 based search, but a database's ability to
 provide relevancy is either non-existent
 or a bolted-on afterthought.

Full Text Search Engines vs. DBMS | Lucidworks

In text retrieval, full-text search refers to techniques for searching a single computer-stored document or a collection in a full-text database. Full-text search is distinguished from searches based on metadata or on parts of the original texts represented in databases. In a full-text search, a search engine examines all of the words in every stored document as it tries to match search criteria. Full-text-searching techniques became common in online bibliographic databases in the 1990s. Many we

Full-text search - Wikipedia

A full-text index stores information about significant words and their location within one or more columns of a database table. A full-text index is a special type of token-based functional index that is built and maintained by the Full-Text Engine for SQL Server. The process of building a full-text index differs from building other types of indexes.
