A neutrino (/ n u: ' t r i: n oʊ / or / n j u: ' t r i: n oʊ /) (denoted by the Greek letter ν) is a fermion (an elementary particle with spin of $1/2$) that interacts only via the weak subatomic force and gravity. The neutrino is so named because it is electrically neutral and because its rest mass is so small that it was long thought to be zero. The mass of the neutrino is much ...

Neutrino - Wikipedia

A neutrino is a subatomic particle that is very similar to an electron, but has no electrical charge and a very small mass, which might even be zero. Neutrinos are one of the most abundant...

What is a neutrino? - Scientific American

Neutrino, elementary subatomic particle with no electric charge, very little mass, and $1/2$ unit of spin. Neutrinos belong to the family of particles called leptons, which are not subject to the strong force. Rather, neutrinos are subject to the weak force that underlies certain processes of radioactive decay.

Neutrino | physics | Britannica

Neutrinos are elusive subatomic particles created in a wide variety of nuclear processes. Their name, which means "little neutral one," refers to the fact that they carry no electrical charge.

What Are Neutrinos? | Live Science

Neutrinos are a type of particle similar to the electron, and belong to the lepton family of fundamental particles.

Neutrinos are distinguished by a lack of charge and a mass that's virtually non-existent.

What Are Neutrinos?

Neutrinos are a type of elementary particle that exist all across the universe. Physicists study these particles, but they are hard to find because they have a very small chance of interacting with regular matter. (For example, they pass through the whole earth without touching any other particles). Neutrinos travel near the speed of light.

Neutrino - Simple English Wikipedia, the free encyclopedia

Neutrinos are one of the fundamental particles which make up the universe. They are also one of the least understood. Neutrinos are

similar to the more familiar electron, with one crucial difference: neutrinos do not carry electric charge. Because neutrinos are electrically neutral, they

What's a Neutrino?

Neutrino detectors are often built underground, to isolate the detector from cosmic rays and other background radiation. The field of neutrino astronomy is still very much in its infancy - the only confirmed extraterrestrial sources so far as of 2018

are the Sun and the supernova 1987A in the nearby Large Magellanic Cloud.

Neutrino detector - Wikipedia

The electron neutrino (a lepton) was first postulated in 1930 by Wolfgang Pauli to explain why the electrons in beta decay were not emitted with the full reaction energy of the nuclear transition. The apparent violation of conservation of energy and momentum was most easily avoided by postulating another particle.

Neutrinos - HyperPhysics Concepts

Neutrinos are elusive subatomic particles that result from certain nuclear reactions. Neutrinos have no electrical charge and only a tiny mass, usually travel at nearly the speed of light, come in three types — electron neutrinos,

muon neutrinos, and tau neutrinos — and barely interact with normal matter.

Neutrino | Encyclopedia.com

Neutrino 400 Lightweight Down Sleeping Bag - Rab® UK

Neutrinos are subatomic particles produced by the decay of radioactive elements and are elementary particles that lack an electric charge, or, as F. Reines would say, "...the most tiny quantity of reality ever imagined by a human being". "The name neutrino was

coined by Enrico Fermi as a word play on neutrone, the Italian name of the neutron."

All About Neutrinos - IceCube Neutrino Observatory

The neutrino belongs to the lepton family, and, by its statistical properties, to the fermion class. The term "neutrino" is applied to two different elementary particles—the electronic neutrino (ν_e) and the muonic neutrino (ν_μ).

Neutrino | Article about neutrino by The Free Dictionary

neutrino (plural neutrinos) An elementary particle that is classified as a lepton , and has an extremely small but nonzero mass and no electric charge . It interacts with the surroundings only via

the weak force or gravitation , making it very difficult to detect.
