Control Instrumentation And Automation Engineering

Instrumentation and control engineering (ICE) is a branch of engineering that studies the measurement and control of process variables, and the design and implementation of systems that incorporate them. Process variables include pressure, temperature, humidity, flow, pH, force and speed. ICE combines two branches of engineering.

Instrumentation and control engineering - Wikipedia

The control of processes is one of the main branches of applied instrumentation. Control instrumentation includes devices such as solenoids, valves, circuit breakers, and relays. These devices are able to change a field parameter, and provide remote or automated control capabilities. Transmitters are devices which produce an analog signal, usually in the form of a 4-20 ma electrical current signal, although many other options using voltage, frequency, or pressure are possible.
