Induction Motor: Basics & Types | Electrical4U

The basic difference is that an induction motor is an asynchronous machine whereas the other one, as the name suggests is a synchronous machine.

Basic Difference Between Induction Motor and Synchronous ...

The theoretical speed of the rotor in an induction motor depends on the frequency of the AC supply and the number of coils that make up the stator and, with no load on the motor, comes close to the speed of the rotating magnetic field. In practice, the load on the motor (whatever it's driving) also plays a part—tending to slow the rotor down.

An Induction Motor is also known as Asynchronous Motor. It is so called because it never runs at synchronous speed. i.e., $N_s = \frac{120f}{P}$. The induction motor is most widely used motor in all domestic and commercial motor. The Synchronous motor always follows a synchronous speed.

Difference between Induction Motor and Synchronous Motor ...

The motor which works on the principle of electromagnetic

induction is known as the induction motor. The electromagnetic induction is the phenomenon in which the electromotive force induces across the electrical conductor when it is placed in a rotating magnetic field. The stator and rotor are two essential parts of the motor.
