Remember, the physics part of the problem is figuring out what you are solving for, drawing the diagram, and remembering the formulae. The rest is just use of algebra, trigonometry, and/or calculus, depending on the difficulty of your course. It is said that the material is like a pyramid; the new information is built upon the old.

How to Solve Any Physics Problem: 10 Steps (with Pictures)

A classic problem in physics, similar to the one we just solved, is that of the Atwood machine, which consists of a rope running over a pulley, with two objects of different mass attached. It is particularly useful in understanding the connection between force and motion. In Figure $\backslash(\backslash\text{PageIndex}\{6\}\backslash)$, $m_1 = 2.00 \text{ kg}$ and $m_2 = 4.00 \text{ kg}$. Consider the pulley

to be frictionless.

Five Great Problems in Theoretical Physics

In most physics problems, there is more than one way to reach a solution, often meaning that more than one equation can work. In fact, in the vast majority of questions, no matter what equation you use – assuming that it is relevant to the subject matter and that you insert the proper variables – you will reach a solution.
