Thus, to graph an equation in two variables, we graph the set of ordered pairs that are solutions to the equation. For example, we can find some solutions to the first-degree equation. $y = x + 2$. by letting x

equal 0, -3, -2, and 3.
Then, for $x = 0$,
 $y = 0 + 2 = 2$. for $x = 0$, y
 $= -3 + 2 = -1$. for $x =$
 -2 , $y = -2 + 2 = 0$.

In an equation of the form $y = mx$, m is the slope of the graph of the equation. Example 1 Sketch the graph of $y = 6x$ and give the slope of the line.

Solution We first make a table showing three sets of ordered pairs that satisfy the equation. Remember, we only need two points to determine the line but we use the third point as a check.

Graph inequalities with Step-by-Step Math Problem Solver

$x - y = -1$. $x - y = -1$
 $y = x + 1$. $x - y = -1$
 $y = x + 1$. The system is now written as.
 $y = -2x - 8$
 $y = x + 1$. Now you can graph both equations using their slopes and intercepts on the same set of axes, as seen in

the figure below. Note how the graphs share one point in common.

Graphs and Solutions to Systems of Linear Equations ...

Inequalities

Flashcards | Quizlet

A good place to start is just to graph the solution sets for each

of these inequalities and then see where they overlap. And that's the region of the x, y coordinate plane that will satisfy all of them. So let's first graph y is equal to $2x$ plus 1, and that includes this line, and then it's all the points greater than that as well.
