ment of many human-computer interaction techniques, starting from primitive text and graphical user interfaces (GUI) to speech and gesture recognition interfaces. The gesture recognition techniques can be classified

into two groups: glove-based and vision-based [2]. The former group of approaches requires users to wear data or color gloves.

Gesture-based Human-computer Interaction

In recent years, hand gesture recognition is gaining great importance in human-computer interaction (HCI) and human-robot interaction (HRI). Different approaches have appeared making use of different sensors and devices. Hand wearable devices such as sensor gloves [1,2] have been used although they are usually expensive and user intrusive.

For many (if not most) people the term includes character recognition, the recognition of proof readers symbols, shorthand, and all of the types of interaction described in the previous chapter, Marking Interfaces.

GESTURE BASED INTERACTION - Bill Buxton

Gesture recognition is a topic in computer science and language technology with the goal of interpreting human gestures via mathematical algorithms. Gestures can originate from any bodily motion or state but commonly originate from the face or hand. Current focuses in the field include emotion recognition from face and hand gesture recognition. Users can use simple

gestures to control or interact with devices without physically touching them. Many approaches have been made using cameras and comp

Human-Computer Interaction. Multimodal and Natural ...

Abstract: The ability of computers to recognise hand gestures visually is essential for progress in human-computer interaction. Gesture recognition has applications ranging from sign language to medical assistance to virtual reality. However, gesture recognition is extremely challenging not only because of its diverse contexts, multiple interpretations, and spatio-temporal variations but also because of the

complex non-rigid properties of the hand.

Review of constraints on vision-based gesture recognition ...

Gestures, widely accepted as a humans' natural mode of interaction with their surroundings, have been considered for use in human-computer based interfaces since the early 1980s. They have been explored and implemented, with a range of success and maturity levels, in a variety of fields, facilitated by a multitude of technologies.
