The radiation enters the detector, interacts with atoms of the detector material and deposits some energy to sensitive material. Each event may generate a signal, which can be a pulse, hole, light signal, ion pairs in a gas, and many others. The main task is to generate sufficient signal, amplify it and to record it.

Detection of Gamma Radiation using Ionization Chamber
Gamma rays have very little trouble in penetrating the metal walls of the chamber. Therefore, ionization chambers may be used to detect gamma radiation and X-rays collectively known as photons, and for this the windowless tube is used.

Detection of Indirectly Ionizing Radiation

Photographic film is

still the most common detector of ionizing radiation, being used routinely in medical and dental x rays. Nuclear radiation is also captured on film, such as seen in Figure 31.2. 1. The mechanism for film exposure by ionizing radiation is similar to that by photons.

31.2: Radiation Detection and Detectors - Physics LibreTexts

We can not see radiation with our eyes but when neutral particles interact with radiation then charged particles are liberated, the detection of which gives an idea about radiation. The principle of detection of nuclear radiation may broadly be classified as:
Method based on the detection of free

charge carriers, by the ionization produced by them e.g. Ionization chambers, Proportional counters, Geiger-Muller counters and Semiconductor Detectors.

Radiation Detectors | Part-1 | GM-Counter

Ionizing radiation (ionising radiation) is radiation, traveling as a particle or electromagnetic wave, that carries sufficient energy to detach electrons from atoms or molecules, thereby ionizing an atom or a molecule. Ionizing radiation is made up of energetic subatomic particles, ions or atoms moving at high speeds (usually greater than 1% of the speed of light), and electromagnetic waves on ...

Ionizing radiation - Wikipedia

Gaseous ionization detectors are radiation detection instruments used in particle physics to detect the presence of ionizing particles, and in radiation protection applications to measure ionizing radiation. They use the ionising effect of radiation upon a gas-filled sensor. If a particle has enough energy to ionize a gas atom or molecule, the resulting electrons and ions cause a current flow which can be measured. Gaseous ionisation detectors form an important group of instruments used for radi

Radiation, Ionization, and Detection in Nuclear Medicine ...

In experimental and applied particle physics, nuclear physics, and nuclear engineering, a particle detector, also known as a radiation detector, is a device used to detect, track, and/or identify ionizing particles, such as those produced by nuclear decay, cosmic radiation, or reactions in a particle

accelerator. Detectors can measure the particle energy and other attributes such as momentum, spin, charge, particle type, in addition to merely registering the presence of the particle.
