For three sets, the Inclusion-Exclusion Principle reads. (2')  $|A \cup B \cup C| = |A| + |B| + |C| - |A \cap B| - |A \cap C| - |B \cap C| + |A \cap B \cap C|$ . We could derive (2') from (2) in the manner of (3) - and this is a good exercise in using set-theoretical notations.

### **The Inclusion-Exclusion Principle**

principle of inclusion-exclusion, proof of. The proof is by induction. Consider a single set  $A_1$ .  $|A_1| = |A_1|$ . Then the principle of inclusion-exclusion states that  $|A_1| = |A_1|$ , which is trivially true. Now consider a collection of exactly two sets  $A_1$ .

THE INCLUSION-EXCLUSION PRINCIPLE  
Peter Trapa November 2005 The inclusion-exclusion principle (like the pigeon-hole principle we studied last week) is simple to state and relatively easy to prove, and yet has rather spectacular applications. In class, for instance, we began with some examples that seemed hopelessly complicated.

### **THE INCLUSION-EXCLUSION PRINCIPLE**

(1) Proof. The left side of (1) counts the number of objects of  $S$  with none of the properties. We establish the identity (1) by showing that an object with none of the properties makes a net

The Inclusion-Exclusion Principle is typically seen in the context of combinatorics or probability theory. In combinatorics, it is usually stated something like the following: Theorem 1 (Combinatorial Inclusion-Exclusion Principle).

The principle of inclusion and exclusion (PIE) is a counting technique that computes the number of elements that satisfy at least one of several properties while guaranteeing that elements satisfying more than one property are not counted twice. An underlying idea behind PIE is that summing the number of elements that satisfy

at least one of two categories and subtracting the overlap prevents double counting.

principle of inclusion and exclusion allows us to do exactly that. Suppose that you have two sets  $A; B$ .

8.6 Applications of Inclusion-Exclusion

Many counting problems can be solved using the principle of inclusion-exclusion. The famous hat-check problem can be solved using the principle of inclusion-exclusion. This problem asks for the probability that no person is given the correct hat back by a hat-check person who gives the hats back randomly.

## 8.6 Applications of Inclusion-Exclusion

With the inclusion-

exclusion principle, there are generally two types of questions that appear in introductory and lower level Discrete Mathematics syllabi. These question types are: The number of elements in certain sets are given as well as how many live in certain set intersections.
