Summary. In order to derive the marine craft equations of motion, it is necessary to study the motion of rigid bodies, hydrodynamics and hydrostatics. This chapter shows that the rigid-body kinetics can be expressed in a vectorial setting according to (Fossen, 1991). The rigid-body equations of motion will be derived using the Newton-Euler formulation and vectorial mechanics.

In chapter 3 we have shown that for a system of particles Newton's second law can be written as $\mathbf{P} = m \mathbf{a}$. This equation is referred to as the translational equation of motion for the mass center of a rigid body. It states that the sum of all the external forces acting on the body is equal to the body's mass times the
