Cambridge Numerical Analysis - University of Cambridge

This article is about numerical methods for the solution of nonlinear equations. We consider both the fixed-point form $\mathbf{x}=\mathbf{G}(\mathbf{x})$ and the equations form $\mathbf{F}(\mathbf{x})=0$ and explain why both versions are necessary to understand the solvers. We include the classical methods to make the presentation complete and discuss less familiar topics such as Anderson ...

Numerical methods for nonlinear equations - Cambridge Core

Based on the continuous Runge--Kutta method (for ordinary differential equations) and the collocation method (for functional equations), two general one-step methods are formulated and their uniform order of approximation are discussed. Numerical stability of a class of Runge--Kutta-Collocation methods is analysed.
