Course Overview: Propagating
 disturbances, or waves, occur frequently
 in applied mathematics. This course will
 be centred on some prototypical
 examples from fluid dynamics, the two
 most familiar being surface gravity
 waves and waves in gases. The models
 for compressible flow will be derived and

then analysed for small amplitude motion.

The Part A (second-year) courses 'Waves

and Fluids' and 'DEs 2' would be desirable. This course combines well with B5.2 Applied Partial Differential Equations. Though the two units are intended to be self-contained, they will complement each other.

B5.3 Viscous Flow - University of Oxford

This textbook provides a clear introduction to both the theory and application of fluid dynamics, and will be suitable for all undergraduates coming to the subject for the first time. Prerequisites are few: a basic knowledge of vector calculus, complex analysis, and simple methods for solving differential equations are all that is needed.
