In contrast, Global Optimization Toolbox solvers are designed to search through more than one basin of attraction. They search in various ways: GlobalSearch and MultiStart generate a number of starting

points. They then use a local solver to find the optima in the basins of attraction of the starting points.

The surrogateopt function in Global Optimization Toolbox™ builds and optimizes a surrogate function in place of the expensive function. This derivative-free method can be applied to nonconvex problems. The problem solved in the video is to determine the optimal position and angle of a cannon to fire a projectile as far as possible over a wall.
