Soil structure interaction (SSI) evaluates the collective response of the structure, the foundation, and the soil underlying and

surrounding the foundation to a specified ground motion.

(PDF) soil structure interaction - ResearchGate

Ground-structure interaction (SSI) consists of the interaction between soil (ground) and a structure built upon it. It is primarily an exchange of mutual stress, whereby the movement of the ground-structure system is influenced by both the type of ground and the type of structure. This is especially applicable to areas of seismic activity. Various combinations of soil and structure can either ...

Soil-structure interaction - Wikipedia

The soil-structure interaction can be defined as the process in which the response from the soil influences the motion of the structure and the motion of the given structure affects the response from the soil. This is a phenomenon in which the structural displacements and the ground displacements are independent to each other.
