Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

What does no solution in algebra mean? - Answers

Solution : Solve the given equation. We find the same coefficient for x on both sides. So, subtract 4x on both sides to get rid of x-terms. $4x + 2 = 4x - 5$. $2 = -5$. When we solve the given equation, we don't find "x" in the result. But the statement ($2 = -5$) we get at last is false. So, there is no solution.

Equations with Many Solutions or No Solution

Solutions of systems of linear equations: no solution. A system of linear equations has no solution if the lines have the same slope but different y-intercepts. For example, the following systems of linear equations will have no solution. We show the slopes for each system with red and the y-intercepts with blue.

Solutions of Systems of Linear Equations - Basic Mathematics

In mathematics, an extraneous solution is a solution, such as that to an equation, that emerges from the process of solving the problem but is not a valid solution to the problem. A missing solution is a solution that is a valid solution to the problem, but

disappeared during the process of solving the problem. Both are frequently the consequence of performing operations that are not invertible for some or all values of the variables, which prevents the chain of logical implications in the proof

Extraneous and missing solutions - Wikipedia

If the variables disappear, and you get a statement that is never true, such as $0 = 5$ or $4 = 7$. then there is "no solution", meaning, when graphed, the two equations would form parallel lines, which never intersect. Ask Algebra House. SB link.

Some equations do not have any solution because they show an impossible situation. Or better we can say that an equation which have no solution means its solution is not a well defined proper number (impossible number). For example: Suppose we have to find out a solution of equation; $1/x = 0$

Infinite Solutions (System of Equations with Infinite ...

For a system of two linear equations and two variables, there can be no solution, exactly one solution, or infinitely many solutions (just like for one linear equation in one variable). If the two equations are in standard form (both variables on one side and a constant on the other side), then the following are true:

Number of solutions to equations | Algebra (video) | Khan ...

To find a value (or values) we can put in place of a variable that makes the equation true. Example: $x + 2 = 7$. The variable is x , when we put 5 in place of x we get $5 + 2 = 7$, and $5 + 2 = 7$ is true, so $x = 5$, and the equation is solved. (Note: if we said $x=6$ then the equation is not solved because $6+2=7$ is not true)

One example of a contradiction equation would be $x+5 = x+2$. No possible constant value for x exists to make this a true equation. There is no way to add 5 and 2 to the same number and end up with the same result. Attempting to solve this sort of reaction ends up with a clear contradiction. In this example, subtracting x from both sides yields $5=2$.
