Radiative Corrections To The Leptonie

We present numerical estimates for the radiative corrections to the decays $L \rightarrow e \mp \nu e \nu L$, $\mu \mp \nu \mu \nu L$ in the context of a $V \pm A$ interaction. The radiative corrections change the Michel parameter appreciably from its bare $V \pm A$ value, for the decay $L \rightarrow e \mp \nu e \nu L$, and have a measurable effect on the electron energy spectrum.

Radiative Corrections To The Leptonie Decays Of The

The radiative corrections, assuming vector and pseudovector interactions, tend to lower the predicted value of a_+ and thus decrease the discrepancy between theory and experiment. However, the difference is still about two standard deviations. The remaining parameters are less sensitive to these corrections.

Radiative Corrections for Lepton Scattering

A new ansatz of democratic lepton mixing is proposed at the GUT scale and the radiative corrections to its phenomenological consequences are calculated at the electroweak scale. We demonstrate that it is possible to obtain the experimentally favored results for both neutrino masses and lepton flavor mixing angles from this ansatz, provided the neutrino Yukawa coupling matrix takes a specific ...

Radiative Corrections To The Leptonie Decays Of The

culation of radiative corrections for lepton scattering at very high energies requires di erent techniques [21,22]. Radiative corrections for electron scattering can be separated into contributions due to (real and virtual) photon radiation from the lepton, from the nucleon, and its interference.

It turns out that δ is rather stable against radiative corrections in both models, except for the minimal supersymmetric standard model with a very large value of $\tan\beta$. Both cases of Majorana and Dirac neutrinos are discussed. In addition, we use the preliminary indication of $\delta = (1.08^{+0.28}_{-0.31})\pi$ or $\delta = (1.67^{+0.37}_{-0.31})\pi$...

Radiative corrections procedures for electron-proton and muon-proton scattering are well established under the assumption that the leptons are

considered in an ultra-relativistic approximation. MUSE experiment at PSI and COMPASS experiment at CERN entered the regions of kinematics where explicit dependence of radiative corrections on the lepton mass becomes important.

Radiative corrections to $\mathcal{B} \rightarrow D \ell \bar{\nu}_\ell$ decays may have an impact on predictions and measurements of the lepton flavour univ In this paper, a comparison between recent calculations of the effect of soft-photon corrections on $\mathcal{R}(\{D\}^+)$ and $\mathcal{R}(\{D\}^0)$, and corrections generated by the widely used package Photos is given.

A new ansatz of democratic lepton mixing is proposed at the GUT scale and the radiative corrections to its phenomenological consequences are calculated at the electroweak scale. We demonstrate that it is possible to obtain the experimentally favored results for both neutrino masses and lepton flavor mixing angles from this ansatz, provided the neutrino Yukawa coupling matrix takes a specific nontrivial pattern.
