The Prediction Of Pressure Drop

In a word, the pressure drop of the Venturi is not only related to the production rate of gas well but also related to the operation safety. Hitherto, there are two methods for the prediction of pressure drop: theoretical analysis model [, , ,] and experimental statistical model [, , ,]. Although lots of academic research and experimental study have been carried out, there is no universal pressure drop prediction model which can suitable for wet gas flow.

Abstract. The pressure drop for turbulent single-phase fluid flow around sharp 90° pipe bends has proven to be difficult to predict owing to the complexity of the flow arising from frictional and separation effects. Existing models accurately predict the frictional effects, but no precise models are available to predict the flow due to separation. It is the purpose of this work to propose a model capable of such prediction.
