Cluster Analysis by Anderberg - AbeBooks

Cluster analysis is one of several data-led techniques that are of potential value in the analysis of PET data. This technique can be used to partition the large number of pixel time-activity curves (TACs, each of which is considered as a vector), obtained from a dynamic scan into a smaller number of clusters (each described by a multinormal distribution about a mean).

Cluster Analysis - an overview | ScienceDirect Topics

Task of grouping a set of objects so that

objects in the same group (or cluster) are more similar to each other than to those in other clusters. The result of a cluster analysis shown as the coloring of the squares into three clusters. Cluster analysis or clustering is the task of grouping a set of objects in such a way that objects in the same group (called a cluster) are more similar (in some sense) to each other than to those in other groups (clusters).

Cluster analysis - Wikipedia

Chapter 15 Cluster analysis. Chapter 15 Cluster analysis. 15.1 INTRODUCTION AND SUMMARY The objective of cluster analysis is to assign observations to groups ("clusters") so that observations within each group are similar to one another with respect to variables or attributes of interest, and the groups themselves stand apart from one another. In other words, the objective is to divide the observations into homogeneous and distinct groups.
