In information theory, the Fisher information is a way of measuring the amount of information that an observable random variable X carries about an estimated parameter θ upon which the probability of X depends.

Fisher Information - an overview | ScienceDirect Topics

Definition. The Fisher information is a way of measuring the amount of information that an observable random variable X carries about an unknown parameter θ upon which the probability of X depends. Let $f(X; \theta)$ be the probability density function (or probability mass function) for X conditional on the value of θ . It describes the probability that we observe a given outcome of X , given a known ...

Fisher information - Wikipedia

The Fisher information measures the localization of a probability distribution function, in the following sense. Let $f(u)$ be a probability density on $\mathbb{R}^N$, and (X_n) a family of independent, identically distributed random variables, with law $f(\cdot - \theta)$, where θ is unknown and should be determined by observation.
