Water quality analysis.

What is HEC-RAS and what is it useful for?

HEC-RAS is a computer
program that models
the hydraulics of water
flow through natural
rivers and other

channels. Prior to the 2016 update to Version 5.0, the program was one-dimensional, meaning that there is no direct modeling of the hydraulic effect of cross section shape changes, bends, and other two- and three-dimensional aspects of flow. The release of Version 5.0 introduced two-dimensional modeling of flow as well as sediment transfer modeling capabilities.
