**Misbehaving: The Making of Behavioral Economics** W. W. Norton & Company  
Winner of the Nobel Prize in Economics Get ready to change the way you think about economics. Nobel laureate Richard H. Thaler has spent his career studying the radical notion that the central agents in the

economy are humans—predictable, error-prone individuals. Misbehaving is his arresting, frequently hilarious account of the struggle to bring an academic discipline back down to earth—and change the way we think about economics, ourselves, and our world. Traditional economics assumes rational actors. Early in his research, Thaler realized these Spock-like automatons were nothing like real people. Whether buying a clock radio, selling basketball tickets, or applying for a mortgage, we all succumb to biases and make decisions that deviate from the standards of rationality assumed by economists. In other words, we misbehave. More importantly, our misbehavior has serious consequences. Dismissed at first by economists as an amusing sideshow, the study of human miscalculations and their effects on markets now drives efforts to make better decisions in our lives, our businesses, and our governments. Coupling recent discoveries in human psychology with a practical understanding of incentives and market behavior, Thaler enlightens readers about how to make smarter decisions in an increasingly mystifying world. He reveals how behavioral economic analysis opens up new ways to look at everything from household finance to assigning faculty

offices in a new building, to TV game shows, the NFL draft, and businesses like Uber. Laced with antic stories of Thaler's spirited battles with the bastions of traditional economic thinking, *Misbehaving* is a singular look into profound human foibles. When economics meets psychology, the implications for individuals, managers, and policy makers are both profound and entertaining. Shortlisted for the Financial Times & McKinsey Business Book of the Year Award

## **Misbehaving**

**The Making of Behavioural Economics** *Penguin Press*

## **Misbehaving**

**The Making of Behavioural Economics** *Penguin UK*

RICHARD H. THALER: WINNER OF THE 2017 NOBEL PRIZE IN ECONOMICS Shortlisted for the Financial Times and McKinsey Business Book of the Year Award ECONOMIST, FINANCIAL TIMES and EVENING STANDARD books of the year From the renowned and entertaining behavioural economist and co-author of the seminal work *Nudge*, *Misbehaving* is an irreverent and enlightening look into human foibles. Traditional economics assumes that rational forces shape everything. Behavioural economics knows better. Richard

Thaler has spent his career studying the notion that humans are central to the economy - and that we're error-prone individuals, not Spock-like automatons. Now behavioural economics is hugely influential, changing the way we think not just about money, but about ourselves, our world and all kinds of everyday decisions. Whether buying an alarm clock, selling football tickets, or applying for a mortgage, we all succumb to biases and make decisions that deviate from the standards of rationality assumed by economists. In other words, we misbehave. Dismissed at first by economists as an amusing sideshow, the study of human miscalculations and their effects on markets now drives efforts to make better decisions in our lives, our businesses, and our governments. Coupling recent discoveries in human psychology with a practical understanding of incentives and market behaviour, Thaler enlightens readers about how to make smarter decisions in an increasingly mystifying world. He reveals how behavioural economic analysis opens up new ways to look at everything from household finance to assigning faculty offices in a new building, to TV quiz shows, sports transfer seasons, and businesses like Uber. When economics meets psychology, the implications for

individuals, managers and policy makers are both profound and entertaining.

## **Summary of Misbehaving**

### **The Making of Behavioral Economics by Richard H. Thaler**

**Quasi Rational Economics** *Russell Sage Foundation*

Standard economics theory is built on the assumption that human beings act rationally in their own self interest. But if rationality is such a reliable factor, why do economic models so often fail to predict market behavior accurately? According to Richard Thaler, the shortcomings of the standard approach arise from its failure to take into account systematic mental

biases that color all human judgments and decisions.

### **An Introduction to Behavioral**

**Economics** *Macmillan International Higher Education*

The third edition of this successful textbook introduces students to behavioral economics. It offers a critical examination of the latest literature, research, developments and debates in the field by discussing topics such as evolutionary psychology and neuroscience. Contains a wealth of case studies, examples and review questions.

**Behavioral Economics For Dummies** *John Wiley & Sons*

A guide to the study of

how and why you really make financial decisions. While classical economics is based on the notion that people act with rational self-interest, many key money decisions—like splurging on an expensive watch—can seem far from rational. The field of behavioral economics sheds light on the many subtle and not-so-subtle factors that contribute to our financial and purchasing choices. And in *Behavioral Economics For Dummies*, readers will learn how social and psychological factors, such as instinctual behavior patterns, social pressure, and mental framing, can dramatically affect our day-to-day decision-making and financial choices. Based on

psychology and rooted in real-world examples, Behavioral Economics For Dummies offers the sort of insights designed to help investors avoid impulsive mistakes, companies understand the mechanisms behind individual choices, and governments and nonprofits make public decisions. A friendly introduction to the study of how and why people really make financial decisions The author is a professor of behavioral and institutional economics at Victoria University An essential component to improving your financial decision-making (and even to understanding current events), Behavioral Economics For Dummies is important

for just about anyone who has a bank account and is interested in why—and when—they spend money.

## **Nudge**

### **Improving Decisions About Health, Wealth, and Happiness** *Penguin*

Now available: Nudge: The Final Edition The original edition of the multimillion-copy New York Times bestseller by the winner of the Nobel Prize in Economics, Richard H. Thaler, and Cass R. Sunstein: a revelatory look at how we make decisions—for fans of Malcolm Gladwell's Blink, Charles Duhigg's The Power of Habit, James Clear's Atomic Habits, and Daniel Kahneman's Thinking, Fast and Slow Named a

Best Book of the Year by The Economist and the Financial Times. Every day we make choices—about what to buy or eat, about financial investments or our children's health and education, even about the causes we champion or the planet itself. Unfortunately, we often choose poorly. *Nudge* is about how we make these choices and how we can make better ones. Using dozens of eye-opening examples and drawing on decades of behavioral science research, Nobel Prize winner Richard H. Thaler and Harvard Law School professor Cass R. Sunstein show that no choice is ever presented to us in a neutral way, and that we are all susceptible to biases that can lead us to make bad

decisions. But by knowing how people think, we can use sensible “choice architecture” to nudge people toward the best decisions for ourselves, our families, and our society, without restricting our freedom of choice.

### **The Winner's Curse**

**Paradoxes and Anomalies of Economic Life** *Simon and Schuster*

Winner of the Nobel Memorial Prize in Economic Sciences. Richard Thaler challenges the received economic wisdom by revealing many of the paradoxes that abound even in the most painstakingly constructed transactions. He presents literate, challenging, and often

funny examples of such anomalies as why the winners at auctions are often the real losers—they pay too much and suffer the "winner's curse"—why gamblers bet on long shots at the end of a losing day, why shoppers will save on one appliance only to pass up the identical savings on another, and why sports fans who wouldn't pay more than \$200 for a Super Bowl ticket wouldn't sell one they own for less than \$400. He also demonstrates that markets do not always operate with the traplike efficiency we impute to them.

**Behavioural  
 Economics: A Very  
 Short Introduction**

*Oxford University Press*

Traditionally economists have based their economic predictions on the assumption that humans are super-rational creatures, using the information we are given efficiently and generally making selfish decisions that work well for us as individuals. Economists also assume that we're doing the very best we can possibly do - not only for today, but over our whole lifetimes too. But increasingly the study of behavioural economics is revealing that our lives are not

that simple. Instead, our decisions are complicated by our own psychology. Each of us makes mistakes every day. We don't always know what's best for us and, even if we do, we might not have the self-control to deliver on our best intentions. We struggle to stay on diets, to get enough exercise and to manage our money. We misjudge risky situations. We are prone to herding: sometimes peer pressure leads us blindly to copy others around us; other times copying others helps us to learn quickly about new, unfamiliar situations. This Very Short Introduction explores the reasons why we make irrational decisions; how we decide quickly; why we make mistakes in risky

situations; our tendency to procrastination; and how we are affected by social influences, personality, mood and emotions. The implications of understanding the rationale for our own financial behaviour are huge. Behavioural economics could help policy-makers to understand the people behind their policies, enabling them to design more effective policies, while at the same time we could find ourselves assaulted by increasingly savvy marketing. Michelle Baddeley concludes by looking forward, to see what the future of behavioural economics holds for us. ABOUT THE SERIES: The Very Short Introductions series from Oxford

University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

**Advances in Behavioral Finance**  
*Princeton University Press*

A definitive and wide-ranging overview of developments in behavioural finance over the past ten years. This second volume presents twenty recent papers by leading specialists that illustrate the abiding power of behavioural finance.

## **The Foundations of Behavioral Economic Analysis**

### **Volume II: Other-Regarding Preferences** *Oxford University Press*

Taken from the first definitive introduction to behavioral economics, *The Foundations of Behavioral Economic Analysis: Other-Regarding Preferences* is an authoritative and cutting edge guide to this essential topic for advanced undergraduate and postgraduate students. It considers the evidence from experimental games on human sociality, and gives models and applications of inequity aversion, intention based reciprocity, conditional cooperation, human

virtues, and social identity. This updated extract from Dhami's leading textbook allows the reader to pursue subsections of this vast and rapidly growing field and to tailor their reading to their specific interests in behavioural economics.

### **Nudge**

**Improving Decisions about Health, Wealth and Happiness, the Final Edition** *Allen Lane*

### **Inside the Nudge Unit**

**How small changes can make a big difference** *Random House*

With a foreword by Richard Thaler, winner of the Nobel Prize in Economics! New

Updated Edition, 2019. Dr David Halpern, behavioural scientist and head of the government's Behavioural Insights Team, or Nudge Unit, invites you inside the unconventional, multi-million pound saving initiative that makes a big difference through influencing small, simple changes in our behaviour. Using the application of psychology to the challenges we face in the world today, the Nudge Unit is pushing us in the right direction. This is their story.

**SUMMARY** -  
**Misbehaving: The Making Of Behavioral Economics By Richard H. Thaler**  
*Shortcut Edition*

\* Our summary is

short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will learn how governments, businesses, and even individuals can make better economic decisions by not losing sight of the psychological flaws in human nature. You will also learn : to be wary of yourself; how to think more logically; how to spend more rationally; how to avoid being trapped by traders; the hidden workings of finance. Richard H. Thaler is considered the father of behavioral economics. Indeed, he is one of the only people to have wondered why classical economic rules were

fallible, irrelevant in the long term, and incapable of predicting crises. Rather than ignoring "economic anomalies" - unexplained variations in financial flows - he instead turned his attention to them and discovered that economics was inextricably linked to psychology. Knowing and anticipating the behavior of individuals therefore means knowing and anticipating the behavior of markets. This discovery opened up many perspectives on the way societies should view their functioning. But you too, in your daily life, can benefit from his research! \*Buy now the summary of this book for the modest price of a cup of coffee!

## **A Course in Behavioral Economics**

*Macmillan International Higher Education*

A Course in Behavioral Economics is a concise and reader-friendly introduction to one of the most influential areas of economics today. Covering all core areas of the subject, the book requires no advanced mathematics and is full of examples, exercises, and problems drawn from the fields of economics, management, marketing, political science, and public policy, among others. It is an ideal first textbook for students coming to behavioral economics from a wide range of disciplines, and would also appeal to the general reader looking for a thorough

and readable introduction to the subject. Available to lecturers: access to an Instructor's Manual at [www.palgrave.com/economics/angner](http://www.palgrave.com/economics/angner), containing a sample syllabus, instructor guide, sample handouts and examinations, and PowerPoint slides.

## **The Community of Advantage**

**A Behavioural  
Economist's Defence  
of the Market** *Oxford  
University Press*

The Community of  
Advantage asks how  
economists should do  
normative analysis.  
Normative analysis in  
economics has usually  
aimed at satisfying  
individuals' preferences.  
Its conclusions have  
supported a long-  
standing liberal

tradition of economics  
that values economic  
freedom and views  
markets favourably.  
However, behavioural  
research shows that  
individuals' preferences,  
as revealed in choices,  
are often unstable, and  
vary according to  
contextual factors that  
seem irrelevant for  
welfare. Robert Sugden  
proposes a reformulation  
of normative economics  
that is compatible with  
what is now known  
about the psychology  
of choice. The growing  
consensus in favour of  
paternalism and  
'nudging' is based on a  
very different way of  
reconciling normative  
economics with  
behavioural findings.  
This is to assume that  
people have well-  
defined 'latent'  
preferences which,

because of potential parties to psychologically-induced errors, are not mutually beneficial agreements. Its always revealed in normative criterion is actual choices. The provision of the economist's job is then the opportunities for to reconstruct latent individuals to preferences and to participate in voluntary design policies to transactions. Using this satisfy them. approach, Sugden Challenging this reconstructs many of the consensus, The normative Community of conclusions of the Advantage argues that liberal tradition. He latent preference and error are argues that a well-functioning market psychologically are economy is an ungrounded concepts, institution that and that economics individuals have reason needs to be more to value, whether or radical in giving up not their preferences rationality satisfy conventional assumptions. Sugden axioms of rationality, advocates a kind of and that individuals' normative economics motivations in such an that does not use the economy can be concept of preference. cooperative rather Its recommendations than self-interested. are addressed, not to an imagined 'social planner', but to citizens, viewed as

**The Undoing Project:  
A Friendship That  
Changed Our Minds**

*W. W. Norton & Company*

"Brilliant. . . Lewis has given us a spectacular account of two great men who faced up to uncertainty and the limits of human reason." —William Easterly, *Wall Street Journal* Forty years ago, Israeli psychologists Daniel Kahneman and Amos Tversky wrote a series of breathtakingly original papers that invented the field of behavioral economics. One of the greatest partnerships in the history of science, Kahneman and Tversky's extraordinary friendship incited a revolution in Big Data studies, advanced evidence-based medicine, led to a new approach to government regulation, and made much of

Michael Lewis's own work possible. In *The Undoing Project*, Lewis shows how their Nobel Prize-winning theory of the mind altered our perception of reality.

## **Behavioral Economics** *Routledge*

Over the last few decades behavioral economics has revolutionized the discipline. It has done so by putting the human back into economics, by recognizing that people sometimes make mistakes, care about others and are generally not as cold and calculating as economists have traditionally assumed. The results have been exciting and fascinating, and have fundamentally changed the way we look at economic behavior.

This textbook introduces all the key results and insights of behavioral economics to a student audience. Ideas such as mental accounting, prospect theory, present bias, inequality aversion and learning are explained in detail. These ideas are also applied in diverse settings such as auctions, stock market crashes, charitable donations and health care, to show why behavioral economics is crucial to understanding the world around us. Consideration is also given to what makes people happy, and how we can potentially nudge people to be happier. This new edition contains expanded and updated coverage of contract theory, bargaining in the family, time and

risk, and stochastic reference points, among other topics, to ensure that readers are kept up to speed with this fast-paced field. The companion website is also updated with a range of new questions and worked examples. This book remains the ideal introduction to behavioral economics for advanced undergraduate and graduate students.

### **Behavioral Insights**

*MIT Press*

The definitive introduction to the behavioral insights approach, which applies evidence about human behavior to practical problems. Our behavior is strongly influenced by factors that lie outside our conscious awareness, although we tend to

underestimate the power of this “automatic” side of our behavior. As a result, governments make ineffective policies, businesses create bad products, and individuals make unrealistic plans. In contrast, the behavioral insights approach applies evidence about actual human behavior—rather than assumptions about it—to practical problems. This volume in the MIT Press Essential Knowledge series, written by two leading experts in the field, offers an accessible introduction to behavioral insights, describing core features, origins, and practical examples. Since 2010, these insights have opened up new ways of

addressing some of the biggest challenges faced by societies, changing the way that governments, businesses, and nonprofits work in the process. This book shows how the approach is grounded in a concern with practical problems, the use of evidence about human behavior to address those problems, and experimentation to evaluate the impact of the solutions. It gives an overview of the approach's origins in psychology and behavioral economics, its early adoption by the UK's pioneering “nudge unit,” and its recent expansion into new areas. The book also provides examples from across different policy areas and guidance on how to run

a behavioral insights project. Finally, the book outlines the limitations and ethical implications of the approach, and what the future holds for this fast-moving area.

### **Finance and the Good Society**

*Princeton University Press*

Nobel Prize-winning economist explains why we need to reclaim finance for the common good. The reputation of the financial industry could hardly be worse than it is today in the painful aftermath of the 2008 financial crisis. New York Times best-selling economist Robert Shiller is no apologist for the sins of finance—he is probably the only person to have predicted both the stock market

bubble of 2000 and the real estate bubble that led up to the subprime mortgage meltdown. But in this important and timely book, Shiller argues that, rather than condemning finance, we need to reclaim it for the common good. He makes a powerful case for recognizing that finance, far from being a parasite on society, is one of the most powerful tools we have for solving our common problems and increasing the general well-being. We need more financial innovation—not less—and finance should play a larger role in helping society achieve its goals. Challenging the public and its leaders to rethink finance and its role in society, Shiller argues that finance

should be defined not merely as the manipulation of money or the management of risk but as the stewardship of society's assets. He explains how people in financial careers—from CEO, investment manager, and banker to insurer, lawyer, and regulator—can and do manage, protect, and increase these assets. He describes how finance has historically contributed to the good of society through inventions such as insurance, mortgages, savings accounts, and pensions, and argues that we need to envision new ways to rechannel financial creativity to benefit society as a whole. Ultimately, Shiller shows how society can once again harness the power of finance for

the greater good.

## **The Why Axis**

### **Hidden Motives and The Undiscovered Economics of Everyday Life** *Harper Collins*

Two of Forbes magazine's "world's most powerful economists" provide the breakthrough ideas to challenge the assumptions of human decision-making. Can economics be passionate? Can it centre on people and what really matters to them? And can it help us understand why they do what they do in everyday life? Two revolutionary economists believe it can. In *The Why Axis*, Uri Gneezy and John List lead us on a journey to discover the economics underlying

human motivation and how to structure the incentives that can get people to move mountains. Finding the right incentive can be like looking for a needle in a haystack, but Gneezy and List have pioneered an innovative approach to zeroing in on those needles. Like other economists, they gather data and build models, but then they go much, much further, embedding themselves in our messy world—the factories, schools, communities and offices where people live, work and play. Their goal: to discover solutions to the big, difficult problems, such as the gap between rich and poor, the violence plaguing inner city schools, why people really discriminate, and

whether women are really less competitive than men. Their revelatory and startling discoveries about how incentives really work are both groundbreaking and immensely practical. This research will change the way we both think about and take action on big and little problems. Anyone working in business, politics, education or philanthropy can use the approach Gneezy and List describe in *The Why Axis* to reach a deeper, more nuanced understanding of human behaviour and a better grasp of what motivates people and why.

## Summary

**Misbehaving: The Making of**

## **Behavioral Economics: 45 Minutes Key Points Summary**

Whether you're considering reading Richard Thaler's *Misbehaving* or you need some help recalling the key concepts, this Executive Reads summary has you covered. In this summary quickly grasp the key ideas in *Misbehaving: The Making of Behavioral Economics* in less than one hour. Learn about: - The underlying problems with traditional economics models - How the pioneers of behavioral economics came together - How they formed their ideas - How these ideas can apply to your life and business Includes: - Important Concepts

discussed in the book. - Summary of the chapters in the book itself. Executive Reads values concise, accurate, and insightful information. We want you to be able to choose the business books you spend the most time with and call upon them later when you need to use the ideas in your career

## **Choice Hacking**

**How to use psychology and behavioral science to create an experience that sings** *Jennifer L. Clinehens*

What if you could use Nobel prize-winning science to predict the choices your customers will make? Customer and user behaviors can seem irrational. Shaped by mental

shortcuts and psychological biases, their actions often appear random on the surface. In Choice Hacking, we'll learn to predict these irrational behaviors and apply the science of decision-making to create unforgettable customer experiences. Discover a framework for designing experiences that doesn't just show you what principles to apply, but introduces a new way of thinking about customer behavior. You'll finish Choice Hacking feeling confident and ready to transform your experience with science. In Choice Hacking, you'll discover:

- How to make sure your customer experience is designed for what people do (not what they say they'll do) -
- How to increase the odds that customers will make the "right choice" in any environment
- How to design user experiences that drive action and engagement
- How to create retail experiences that persuade and drive brand love
- How brands like Uber, Netflix, Disney, and Starbucks apply these principles in their customer and user experiences

Additional resources included with the book:

- Access to free video Companion Course
- Access to exclusive free resources, tools, examples, and use cases online

Who will benefit from reading Choice Hacking? This book was written for anyone who wants to better understand

customer and user decision-making. Whether you're a consultant, strategist, digital marketer, small business owner, writer, user experience designer, student, manager, or organizational leader, you will find immediate value in Choice Hacking. About the Author Jennifer Clinehens is currently Head of Experience at a major global experience agency. She holds a Master's degree in Brand Management as well as an MBA from Emory University's Goizueta School. Ms. Clinehens has client-side and consulting experience working for brands like AT&T, McDonald's, and Adidas, and she's helped shape customer experiences across the globe. A recognized

authority in marketing and customer experience, she is also the author of CX That Sings: An Introduction To Customer Journey Mapping. To learn more about this book or contact the author, please visit [ChoiceHacking.com](http://ChoiceHacking.com)

## **Behavioral Economics**

### **Toward a New Economics by Integration with Traditional Economics** *Springer*

This book is intended as a textbook for a course in behavioral economics for advanced undergraduate and graduate students who have already learned basic economics. The book will also be useful for introducing behavioral economics

to researchers. Unlike some general audience books that discuss behavioral economics, this book does not take a position of completely negating traditional economics. Its position is that both behavioral and traditional economics are tools that have their own uses and limitations. Moreover, this work makes clear that knowledge of traditional economics is a necessary basis to fully understand behavioral economics. Some of the special features compared with other textbooks on behavioral economics are that this volume has full chapters on neuroeconomics, cultural and identity economics, and economics of happiness. These are distinctive subfields of economics that are different from, but closely related to, behavioral economics with many important overlaps with behavioral economics. Neuroeconomics, which is developing fast partly because of technological progress, seeks to understand how the workings of our minds affect our economic decision making. In addition to a full chapter on neuroeconomics, the book provides explanations of findings in neuroeconomics in chapters on prospect theory (a major decision theory of behavioral economics under uncertainty), intertemporal economic behavior, and social preferences (preferences that

exhibit concerns for others). Cultural and identity economics seek to explain how cultures and people's identities affect economic behaviors, and economics of happiness utilizes measures of subjective well-being. There is also a full chapter on behavioral normative economics, which evaluates economic policies based on findings and theories of behavioral economics.

### **Uncertain Futures**

**Imagines, Narratives, and Calculation in the Economy** *Oxford University Press*

Uncertain Futures considers how economic actors visualize the future and decide how to act in conditions of radical

uncertainty. It starts from the premise that dynamic capitalist economies are characterized by relentless innovation and novelty and hence exhibit an indeterminacy that cannot be reduced to measurable risk. The organizing question then becomes how economic actors form expectations and make decisions despite the uncertainty they face. This edited volume lays the foundations for a new model of economic reasoning by showing how, in conditions of uncertainty, economic actors combine calculation with imagines and narratives to form fictional expectations that coordinate action and provide the confidence to act. It

draws on groundbreaking research in economic sociology, economics, anthropology, and psychology to present theoretically grounded empirical case studies. These demonstrate how grand narratives, central bank forward guidance, economic forecasts, finance models, business plans, visions of technological futures, and new era stories influence behaviour and become instruments of power in markets and societies. The market impact of shared calculative devices, social narratives, and contingent imaginaries underlines the rationale for a new form of narrative economics.

## **Economics Doomed?**

### **The Ordinary versus the Extraordinary**

*Open Book Publishers*

In this book, David K. Levine questions the idea that behavioral economics is the answer to economic problems. He explores the successes and failures of contemporary economics both inside and outside the laboratory, and asks whether popular behavioral theories of psychological biases are solutions to the failures. The book not only provides an overview of popular behavioral theories and their history, but also gives the reader the tools for scrutinizing them.

## **Risk Savvy**

## **Is Behavioral**

### **How to Make Good Decisions** *Penguin*

A new eye-opener on how we can make better decisions—by the author of *Gut Feelings* In this age of big data we often trust that expert analysis—whether it's about next year's stock market or a person's risk of getting cancer—is accurate. But, as risk expert Gerd Gigerenzer reveals in his latest book, *Risk Savvy*, most of us, including doctors, lawyers, and financial advisors, often misunderstand statistics, leaving us misinformed and vulnerable to exploitation. Yet there's hope. In *Risk Savvy*, Gigerenzer gives us an essential guide to the science of good decision making, showing how ordinary

people can make better decisions for their money, their health, and their families. Here, Gigerenzer delivers the surprising conclusion that the best results often come from considering less information and listening to your gut.

### **The Little Book of Behavioral Investing**

#### **How not to be your own worst enemy**

*John Wiley & Sons*

A detailed guide to overcoming the most frequently encountered psychological pitfalls of investing Bias, emotion, and overconfidence are just three of the many behavioral traits that can lead investors to lose money or achieve lower returns. Behavioral finance,

which recognizes that there is a psychological element to all investor decision-making, can help you overcome this obstacle. In *The Little Book of Behavioral Investing*, expert James Montier takes you through some of the most important behavioral challenges faced by investors. Montier reveals the most common psychological barriers, clearly showing how emotion, overconfidence, and a multitude of other behavioral traits, can affect investment decision-making. Offers time-tested ways to identify and avoid the pitfalls of investor bias

Author James Montier is one of the world's foremost behavioral analysts. Discusses how to learn from our investment mistakes

instead of repeating them. Explores the behavioral principles that will allow you to maintain a successful investment portfolio. Written in a straightforward and accessible style, *The Little Book of Behavioral Investing* will enable you to identify and eliminate behavioral traits that can hinder your investment endeavors and show you how to go about achieving superior returns in the process. Praise for *The Little Book Of Behavioral Investing*

"*The Little Book of Behavioral Investing* is an important book for anyone who is interested in understanding the ways that human nature and financial markets interact."

—Dan Ariely, James B.

Duke Professor of Behavioral Economics, Duke University, and author of *Predictably Irrational* "In investing, success means being on the right side of most trades. No book provides a better starting point toward that goal than this one."

—Bruce Greenwald, Robert Heilbrunn Professor of Finance and Asset Management, Columbia Business School "Know thyself.' Overcoming human instinct is key to becoming a better investor. You would be irrational if you did not read this book."

—Edward Bonham-Carter, Chief Executive and Chief Investment Officer, Jupiter Asset Management "There is not an investor anywhere who wouldn't profit from

reading this book."

—Jeff Hochman, Director of Technical Strategy, Fidelity Investment Services Limited "James Montier gives us a very accessible version of why we as investors are so predictably irrational, and a guide to help us channel our 'Inner Spock' to make better investment decisions. Bravo!"

—John Mauldin, President, Millennium Wave Investments

## **Behavioural Macroeconomics**

*Edward Elgar Pub*

This invaluable volume brings together seminal articles with a significant behavioural content on various areas in macroeconomics. The topics covered include a historical perspective on psychology and

economics, social norms and macroeconomics, the nature of unemployment, unemployment and inflation, consumption and saving, the causes of the global financial crisis, economic growth and happiness and income distribution and the underclass. the collection also covers a broad range of the theories and methods used in behavioural economics.

## **Behavioural Economics**

### **Psychology, neuroscience, and the human side of economics** *Icon Books*

The controversial science that claims to have revolutionised economics. For centuries, economics was dominated by the

idea that we are rational individuals who optimise our own 'utility'. Then, in the 1970s, psychologists demonstrated that the reality is a lot messier. We don't really know what our utility is, and we care about people other than ourselves. We are susceptible to external nudges. And far from being perfectly rational we are prone to 'cognitive biases' with complex effects on decision-making, such as forgetting to prepare for retirement. David Orrell explores the findings from psychology and neuroscience that are shaking up economics - and that are being exploited by policy-makers and marketers alike, to shape everything from how we shop for food, to

how we tackle societal happiness or climate change. Finally, he asks: is behavioural economics a scientific revolution, or just a scientific form of marketing?

### Noise

#### **A Flaw in Human Judgment** *Little, Brown*

From the Nobel Prize-winning author of *Thinking, Fast and Slow* and the coauthor of *Nudge*, a revolutionary exploration of why people make bad judgments and how to make better ones—"a tour de force" (New York Times). Imagine that two doctors in the same city give different diagnoses to identical patients—or that two judges in the same courthouse give markedly different

sentences to people who have committed the same crime. Suppose that different interviewers at the same firm make different decisions about indistinguishable job applicants—or that when a company is handling customer complaints, the resolution depends on who happens to answer the phone. Now imagine that the same doctor, the same judge, the same interviewer, or the same customer service agent makes different decisions depending on whether it is morning or afternoon, or Monday rather than Wednesday. These are examples of noise: variability in judgments that should be identical. In *Noise*, Daniel Kahneman, Olivier Sibony, and

Cass R. Sunstein show the detrimental effects of noise in many fields, including medicine, law, economic forecasting, forensic science, bail, child protection, strategy, performance reviews, and personnel selection. Wherever there is judgment, there is noise. Yet, most of the time, individuals and organizations alike are unaware of it. They neglect noise. With a few simple remedies, people can reduce both noise and bias, and so make far better decisions. Packed with original ideas, and offering the same kinds of research-based insights that made *Thinking, Fast and Slow* and *Nudge* groundbreaking New York Times bestsellers, *Noise* explains how and

why humans are so susceptible to noise in judgment—and what we can do about it.

## **Impeachment**

### **A Citizen's Guide** *Harvard University Press*

Cass Sunstein considers actual and imaginable arguments for a president's removal, explaining why some cases are easy and others hard, why some arguments for impeachment are judicious and others not. In direct and approachable terms, he dispels the fog surrounding impeachment so that all Americans may use their ultimate civic authority wisely.

## **Culture and Prosperity**

**The Truth About  
Markets - Why Some  
Nations Are Rich But  
Most Remain Poor**

*Harper Collins*

A noted British economic columnist analyzes the nature and inner workings of market economies and the social, political, and cultural factors that transform them into dynamic entities but also limit their power.

**Red Ink**

**Inside the High-  
Stakes Politics of  
the Federal Budget**

*Currency*

The Pulitzer-Prize-winning reporter, columnist, and bestselling author of *In Fed We Trust*, dissects the federal budget in this New York Times bestseller. In a sweeping narrative about the people and

the politics behind the budget--a topic that is fiercely debated today in the halls of Congress and the media, and yet is often misunderstood by the American public--Wessel looks at the 2011 fiscal year (which ended September 30) to see where all the money was actually spent, and why the budget process has grown wildly out of control. Through the eyes of key people, including Jacob Lew, White House director of the Office of Management and Budget; Douglas Elmendorf, director of the Congressional Budget Office; Blackstone founder and former Commerce Secretary Pete Peterson; and more, Wessel gives readers an inside look at the making of our

unsustainable budget.

## **Predictably Irrational**

### **The Hidden Forces That Shape Our Decisions** *Harper Collins*

Intelligent, lively, humorous, and thoroughly engaging, "The Predictably Irrational" explains why people often make bad decisions and what can be done about it.

## **Making Other Worlds Possible**

### **Performing Diverse Economies** *U of Minnesota Press*

There is no doubt that "economy" is a keyword in contemporary life, yet what constitutes economy is increasingly contested terrain. Interested in

building "other worlds," J. K. Gibson-Graham have argued that the economy is not only diverse but also open to experimentations that foreground the well-being of humans and nonhumans alike. *Making Other Worlds Possible* brings together in one volume a compelling range of projects inspired by the diverse economies research agenda pioneered by Gibson-Graham. This collection offers perspectives from a wide variety of prominent scholars that put diverse economies into conversation with other contemporary projects that reconfigure the economy as performative. Here, Robert Snyder and Kevin St. Martin explore the emergence

of community-supported fisheries; Elizabeth S. Barron documents how active engagements between people, plants, and fungi in the United States and Scotland are examples of highly productive diverse economic practices; and Michel Callon investigates how alternative forms of market organization and practices can be designed and implemented. Firmly establishing diverse economies as a field of research, *Making Other Worlds Possible* outlines an array of ways scholars are enacting economies differently that privilege ethical negotiation and a politics of possibility. Ultimately, this book contributes to the making of economies that put people and the environment at the forefront of economic decision making. Contributors: Elizabeth S. Barron, U of Wisconsin-Oshkosh; Amanda Cahill; Michel Callon, École des mines de Paris; Jenny Cameron, U of Newcastle, Australia; Stephen Healy, Worcester State U; Yahya M. Madra, Bogazici U; Deirdre McKay, Keele U; Sarah A. Moore, U of Wisconsin-Madison; Ceren Özselsçuk, Bogazici U; Marianna Pavlovskaya, Hunter College, CUNY; Paul Robbins, U of Wisconsin-Madison; Maliha Safri, Drew U; Robert Snyder, Island Institute; Karen Werner, Goddard College.
