Integrating Qualitative and Quantitative Methods *SAGE Publications*

Focusing on research designs for projects that collect both qualitative and quantitative data, this practical book discusses strategies for bringing qualitative and quantitative methods together so that their combined strengths accomplish more than is possible with a single method. The approach is broadly interdisciplinary, reflecting the interest in mixed methods research of social scientists from anthropology, communication, criminal justice, education, evaluation, nursing, organizational behavior, psychology, political science, public administration, public health, sociology, social work, and urban studies. In contrast to an "anything goes" approach or a naïve hope that "two methods are better than one," the author argues that projects using mixed methods must pay even more attention to research design than single method approaches. The book's practical emphasis on mixed methods makes it useful both to active researchers and to students who intend to pursue such a career.

Mixing Methods: Qualitative and Quantitative Research *Routledge*

This book focuses on a key issue in the methodology of the social and behavioural sciences: the mixing of different research methods. The extent to which qualitative and quantitative research differ from one another has long been a subject of debate. Mixing Methods: Qualitative and Quantitative Research presents a comprehensive discussion of the theoretical, methodological and practical issues. It also covers a number of case studies of research which have successfully combined qualitative and quantitative approaches. Contributors include sociologists who have written extensively on the methodology of the social sciences and researchers who have concerned themselves with important social policy issues in the fields of further education, community services and household finances.

30 Essential Skills for the Qualitative Researcher *SAGE Publications*

The Second Edition of 30 Essential Skills for the Qualitative Researcher provides practical, applied information for the novice qualitative researcher, addressing the "how" of conducting qualitative research in one brief guide. Author John W. Creswell and new co-author Johanna Creswell Báez draw on many examples from their own research experiences, sharing them throughout the book. The 30 listed skills are competencies that can help qualitative researchers conduct more thorough, more

rigorous, and more efficient qualitative studies. By starting with a strong foundation of a skills-based approach to qualitative research, readers can continue to develop their skills over the course of a career in research. This revised edition updates skills to follow the research process, using new research from a wide variety of disciplines like social work and sociology as examples. Chapters on research designs now tie back explicitly to the five approaches to qualitative research so readers can better integrate their new skills into these designs. Additional figures and tables help readers better visualize data collection through focus groups and interviews and better organize and implement validity checks. The new edition provides further examples on how to incorporate reflexivity into a study, illuminating a challenging aspect of qualitative research. Information on writing habits now addresses co-authorship and provides more context and variation from the two authors.

Advances in Mixed Methods Research *SAGE*

Advances in Mixed Methods Research provides an essential introduction to the fast-growing field of mixed methods research. Bergman's book examines the current state of mixed-methods research, exploring exciting new ways of conceptualizing and conducting empirical research in the social and health sciences. Contributions from the world's leading experts in qualitative, quantitative, and mixed methods approaches are brought together, clearing the way for a more constructive approach to social research. These contributions cover the main practical and methodological issues and include a number of different visions of what mixed methods research is. The discussion also covers the use of mixed methods in a diverse range of fields, including sociology, education, politics, psychology, computational science and methodology. This book represents an important contribution to the ongoing debate surrounding the use of mixed methods in the social sciences and health research, and presents a convincing argument that the conventional, paradigmatic view of qualitative and quantitative research is outdated and in need of replacement. It will be essential reading for anyone actively engaged in qualitative, quantitative and mixed methods research and for students of social research methods. Qualitative Inquiry and Research Design *SAGE*

Civil rights rhetoric has been central to the debate over U.S. immigration policy since at least the 1960s. A coalition of interest groups, including churches, ethnic organizations, civil rights groups, and employer associations has played a fundamental role in advancing civil rights norms in the immigration arena. The growing importance of civil rights rhetoric in the debate over U.S. immigration policy, DeLaet asserts, helps to explain the liberalization of U.S. immigration policy in spite of growing evidence that the public opposition to immigration has grown during the same period. In turn, the liberalization of U.S. immigration policy has contributed to rising numbers of both legal and illegal immigrants. Thus, high levels of immigration reflect the basic provisions of current U.S. immigration policy, rather than a loss of governmental control. Many analysts have suggested that the immigration policy reforms passed by Congress in 1996 marked the beginning of a new era of restrictionism. However, as DeLaet illustrates, the new restrictions adopted in 1996 contain many of the same loopholes as previous legislation, indicating the coalition of interest groups supporting immigration still pose a significant obstacle to efforts to restrict immigration.

Mertens shows how to formulate research questions based on community needs, develop researcher-community partnerships grounded in trust and respect, and skillfully apply quantitative, qualitative, and mixed-methods data collection strategies. Practical aspects of analyzing and reporting results are addressed, and numerous sample studies are presented. An ideal core book for graduate courses, or practitioner resource, the book includes: Commentary on the sample studies that explains what makes them transformative. Explanations of key concepts related to oppression, social justice, and the role of research and evaluation. Questions for Thought to stimulate critical self-reflection and discussion. Advance chapter organizers and chapter summaries. The book is intended for graduate students in psychology, education, social work, sociology, and nursing, as well as practicing researchers and program evaluators. It will serve as a core book or supplement in Research Methods, Program Evaluation, and Community Psychology courses.

Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Understanding and Evaluating Research *SAGE Publications*

Understanding and Evaluating Research: A Critical Guide aims to sensitize students to the necessity of learning how not to defer to the mysterious authority of the experts, but rather to learn how to be a critical consumer of others' research, and to gain confidence in their ability to be producers of research. Sue McGregor shows students how to be research literate, and how to find, critique and apply other people's scholarship. This textbook is grounded in a solid understanding of the prevailing research methodologies for creating new knowledge (philosophical underpinnings), which in turn dictate problem posing, theory selection, and research methods (tasks for sampling, collecting and analyzing data, and reporting results).

Action Research in Practice *Routledge*

This book presents a collection of stories from action research projects in schools and a university. This collection is more than simply an illustration of the scope of action research in education - it shows how projects that differ on a variety of dimensions can raise similar themes, problems and issues. The book begins with theme chapters discussing action research, social justice and partnerships in research. The case study chapters cover topics such as: * school environment - how to make a school a healthier place to be * parents - how to involve them more in decision-making * students as action researchers * a state system - a collaborative effort between university staff and a state education department * gender - how to promote gender equity in schools * improving assessment in the social sciences * staff development planning * doing a PhD through action research * writing up action research projects.
