Thanks to Orgel, the idea that life began with RNA and genetics got off to an early head start. Then came the 1980s, and a startling discovery that seemed to pretty much confirm it.

BBC - Earth - The secret of how life on Earth began

How did life originate? Living things (even ancient organisms like bacteria) are enormously complex. However, all this complexity did not leap fully-formed from the primordial soup. Instead life almost certainly originated in a series of small steps, each building upon the complexity that evolved previously: Simple organic molecules were formed.

How did life originate?

Another belief is that life's building blocks first formed elsewhere in the universe and arrived here embedded in meteors. But that does not answer the question of how life began; it just pushes the issue from earth into space. Scientists speculate about the existence of molecules that preceded genetic material as we know it today.
