Producers, Consumers, and Decomposers in the Forest Community.

By Taylor Seigler. A: Producers:

Photosynthesizing organisms. Producers are any kind of green plant. Green plants make their food by taking sunlight and using the energy to make sugar. The plant uses this sugar, also called glucose to make many things, such as wood, leaves, roots, and bark.

Producers, Consumers, and Decomposers in the forest community

A food chain always starts with a producer.

This is an organism that makes its own food. Most food chains start with a green plant, because plants can make their food by photosynthesis. A living...
