End fed half wave antenna: One method of providing a multi-band antenna for the amateur radio or ham bands is to use an end fed half wave antenna. This antenna is a half wavelength at the lowest frequency of operation, and then as

the other bands on which it can be used are harmonically related, it provides a multiple number of half wavelengths.

Long Wire: End Fed Wire Antenna » Electronics Notes

The antenna was designed for the ham radio bands of the day: 160, 80, 40, 20 and 10 metres. Details for the W3EDP antenna are quite straightforward, and it is basically another version of an end fed wire antenna. The antenna is fed via coaxial cable and passes through a tuned matching transformer.

Electronics Notes

Connect one end of the secondary and the inner of the capacitor coax to the red

antenna terminal using a solder tag. Connect the other end of the secondary, the braid of the coax and the earth shorting wire to the green terminal using another tag. Tuning Caution: This is best done with an antenna analyser. Arrange for the half wave antenna wire to
