Phase Behavior (PVT) Studies on a complete range of reservoir types to support the engineering, design and optimization of reservoirs, processes and facilities. Phase Behavior (PVT) analysis needs to be performed on representative fluid samples collected at the earliest opportunity, normally during the drilling of the first exploration well and certainly before the reservoir is put into full production.

Abstract. This paper describes the application of PVT data, routinely determined for almost all conventional oil tests, with respect to petroleum exploration in a broader context. The use of PVT and phase behaviour analysis focuses on phase envelope

evolution as a function of source rock maturity and secondary migration using both laboratory analyses and natural examples from the Ekofisk, Eldfisk and Snorre Fields as well as data from the Tampen Spur area and Barents Sea in general.

PVT and Reservoir Fluid Phase Behaviour. Our PVT and reservoir fluid phase behaviour studies deliver valuable data to oil and gas organisations and assist them in evaluating and modelling their petroleum reserves. Pressure, volume temperature (PVT) and reservoir fluid phase behaviour examinations provide important information that enables oil and gas organisations to predict the performance of fluids through all stages of recovery.

Model 3000 PVT Phase Behaviour System. The Chandler Engineering 3000 PVT system is designed as a precision, multi-tasking instrument for understanding the behaviour of complex mixtures. The study of thermo-physical properties of fluids such as phase behaviour, density, viscosity, etc. under varying conditions of pressure, temperature and volume is commonly known as PVT studies.
