Helping Children Learn Mathematics *National Academies Press*

Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major

changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

Go Math! Standards Practice Book Level 5 *Houghton Mifflin School*

Investigations *Oxford University Press*

"It may be that I have stumbled upon an adequate description of life itself." These modest yet profound words trumpet an imminent paradigm shift in scientific, economic, and technological thinking. In the tradition of Schrödinger's classic *What Is Life?*, Kauffman's *Investigations* is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science

does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of *Investigations* unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere else in the cosmos.

Inquiry Strategies for Science and Mathematics Learning

Mathematics Learning in Early Childhood

Paths Toward Excellence and Equity *National Academies Press*

Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the

critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners—those who work directly with children and their families in shaping the policies that affect the education of young children.

Between the State and the Schoolhouse

Understanding the Failure of Common Core

Between the State and the Schoolhouse examines the Common Core State Standards from the initiative's promising beginnings to its disappointing outcomes. Situating the standards in the long history of state and federal efforts to shape education, the book describes a series of critical lessons that highlight the political and structural challenges of large-scale, top-down reforms. Education policy expert Tom Loveless argues that there are too many layers between the state and the classroom for a national standards approach to be effective. Specifically, he emphasizes the significant gap between states' roles in designing education policy and teachers' roles as implementers of policy. In addition, he asserts that top-down policies are unpredictable, subject to political and ideological pressures, and vulnerable to the pendulum effect as new reforms emerge in response to previous ones. One of the most ambitious education reforms of the past century, the Common Core aimed to raise student success, prepare larger numbers of students for both college and careers, and close achievement gaps. Yet, as Loveless documents, a decade later there remains a lack of significant positive impact on student learning. *Between the State and the Schoolhouse* marks an important contribution to the debate over the standards movement and the role of federal and state governments in education reform.

The Teacher Wars

A History of America's Most Embattled Profession *Anchor*

"A brilliant young scholar's history of 175 years of teaching in America shows that teachers have always borne the brunt of shifting, often impossible expectations. In other nations, public schools are one thread in a quilt that includes free universal child care, health care, and job training. Here, schools are the whole cloth. Today we look around the world at countries like Finland and South Korea, whose students consistently outscore Americans on standardized tests, and wonder what we are doing wrong. Dana Goldstein first asks the often-forgotten question: "How did we get here?" She argues that we must take the historical perspective, understanding the political and cultural baggage that is tied to teaching, if we have any hope of positive change. In her lively, character-driven history of public teaching, Goldstein guides us through American education's many passages, including the feminization of teaching in the 1800s and the fateful growth of unions, and shows that the battles fought over nearly two centuries echo the very dilemmas we cope with today. Goldstein shows that recent innovations like Teach for America, merit pay, and teacher evaluation via student testing are actually as old as public schools themselves. Goldstein argues that long-festered ambivalence about teachers--are they civil servants or academic professionals?--and unrealistic expectations that the schools alone should compensate for poverty's ills have driven the most ambitious people from becoming teachers and sticking with it. In America's past, and in local innovations that promote the professionalization of the teaching corps, Goldstein

finds answers to an age-old problem"--

Knowing and Teaching Elementary Mathematics

Teachers' Understanding of Fundamental Mathematics in China and the United States *Routledge*

Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. *Knowing and Teaching Elementary Mathematics* describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S. counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S. and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated

preface, introduction, and key journal articles that frame and contextualize this seminal work.

Eureka Math, A Story of Units, Grade 5, Module 1

Place Value and Decimal Fractions *Jossey-Bass*

Eureka Math A Story of Units Eureka Math is based on the theory that mathematical knowledge is conveyed most clearly and effectively when it is taught in a sequence that follows the "story" of mathematics itself. In A Story of Units, our elementary curriculum, this sequencing has been joined with methods of instruction that have been proven to work, in this nation and abroad. These methods drive student understanding beyond process to deep mastery of mathematical concepts. The goal of Eureka Math is to produce students who are not merely literate, but fluent, in mathematics. This teacher edition is a companion to Eureka Math online and EngageNY. Sequence of Grade 5 Modules: Module 1: Place Value and Decimal Fractions Module 2: Multi-Digit Whole Number and Decimal Fraction Operations Module 3: Addition and Subtraction of Fractions Module 4: Multiplication and Division of Fractions and Decimal Fractions Module 5: Addition and Multiplication with Volume and Area Module 6: Problem Solving with the Coordinate Plane
