Multiple Myeloma - Symptoms, Causes, Stages, Basics

When myeloma cells dissolve bone, calcium is released, which leads to high blood levels of calcium (hypercalcemia). Symptoms include feeling very thirsty, drinking a lot of fluids, and frequent urination. This can cause dehydration and even kidney failure. High calcium can also cause severe constipation and loss of appetite.

Multiple Myeloma Signs and Symptoms - The Myeloma Crowd

The most common infection in people with myeloma is pneumonia. Other conditions resulting from crowding of healthy cells by myeloma cells include low red blood cell count (anemia, which can cause symptoms such as weakness, fatigue, dizziness, shortness of breath, and pale skin) or low platelet count (called thrombocytopenia).

Multiple Myeloma: Signs, Symptoms, and Complications

Another sign of multiple myeloma is anemia. Anemia is a condition in which patients may feel tired or easily fatigued due to abnormalities in their bloodstream. While there are many causes for anemia, in this case, it is caused by a decreased production of red blood cells.
