As long as you stick to statistical methods for time series, automatic forecasting remains, if not an easy problem, at least an approachable one. The problem amounts to a statistical model selection question (Or a curve fitting exercise in the case of FB Prophet), which has some solid theoretical foundations and is discussed and explored in several graduate level text books.

Automated Time Series Forecasting - StartWheel

Inspired by the recent work of Hatami, Gavet, and Debayle (2017) and Wang and Oates (2015) in time series classification tasks, this paper aims to explore time series forecasting based on model averaging with the idea of time series imaging, from which time series global and local features can be automatically extracted using computer vision algorithms. The proposed approach also enables automated feature extraction.

Automatic Time Series Forecasting: The forecast Package for R

Time series forecasting is one of the most active research topics. Machine learning methods have been increasingly adopted to solve these predictive tasks. However, in a recent work, these were shown to systematically present a lower predictive performance relative to simple statistical methods. In this work, we counter these results. We show that these are only valid under an extremely low ...

Automatic Time Series Forecasting: The forecast Package ...

You need to keep in mind that an automated forecasting approach is never going to find the best model for each and every time series - it is going to give a reasonably good model on average over all the time series, but it is still possible that some of those time series will have better models than the ones selected by the automated method.

Is it possible to automate time series forecasting ...

The Core Data Science team at Facebook developed an automated time-series forecasting package called the prophet. It is maintained in parallel in both R and Python. The needs of massive companies like Facebook can go beyond the standard A/B testing when they want to test many features (and have access to

So.Much.Data.) at once. A lot of their product features can also be influenced by seasonal behaviors.

Automatic time series forecasting: the forecast package for R where m is the length of seasonality (e.g., the number of months or quarters in a year), l represents the level of the series, b denotes the growth, s is the seasonal component, $\hat{y}_{t+h|t}$ is the forecast for h periods ahead, and $h. + m = (h - 1) \bmod m. + 1$.

Automatic time series forecasting: the forecast package for R

After completing the training of the model, the retraining process is performed to further improve the performance of the network. The forecasting of time-series is done with the help of output values generated from the neural network. The DNN model, as per the proposed framework, is shown in Fig. 2. The resultant network is a single layered architecture model consisting of an activation sigmoid function used in a dense layer, which models the outcome between the values $[0, 1]$.
