With the use of ultrasonography in peripheral nerve blocks, paravertebral block can now be performed by direct observation through ultrasound. Ultrasound-guided paravertebral block practices have been reported in children (1, 2). We aimed to share our first experience in ultrasound-guided paravertebral block application.

Ultrasound-Guided Thoracic Paravertebral Block Experience ...

In all ultrasound-guided paravertebral block techniques, an indication of correct needle tip placement is the anterior displacement of the parietal pleura when the solution of local anaesthetic is being injected. Hydrolocation with saline can be used to help with needle tip position; this is particularly useful when the anatomy on

Ultrasound-Guided Paravertebral Block

Two meta-analyses of randomized controlled trials demonstrated that thoracic paravertebral block (TPVB) combined with GA or monitored anesthesia care has several advantages, such as better postoperative pain control, lower incidence of PONV, shorter recovery time, and higher patient

satisfaction, compared to GA alone in breast surgery.^{6,7} Few studies have been published describing surgery without GA for breast cancer but all included the use of intra-operative opioids for sedation.^{8,9}
