The solution of the original equation is the number -3; however, the answer is

often displayed in the form of the equation $x = -3$. Since each equation obtained in the process is equivalent to the original equation, -3 is also a solution of $2x + 1 = x - 2$. In the above example, we can check the solution by substituting -3 for x in the original equation. $2(-3) + 1 = (-3) - 2 - 5 = -5$. The symmetric property of equality is also helpful in the solution of equations. This property states
