Basic Heat Transfer And Some

There are three modes of heat transfer: conduction, convection, and radiation. The basic microscopic mechanism of conduction is the motion of molecules and electrons. It can occur in solids, liquids and gases. In non-metallic solids the transfer of heat energy is due mainly to lattice vibrations.

BASIC HEAT TRANSFER AND SOME APPLICATIONS IN POLYMER ...

Convection is when heated particles transfer heat to another substance, such as cooking something in boiling water. Radiation is when heat is transferred through electromagnetic waves, such as from the sun. Radiation can transfer heat through empty space, while the other two methods require some form of matter-on-matter contact for the transfer.

Introduction to Heat Transfer: How Does Heat Transfer?

The most basic rule of heat transfer is that heat always flows from a warmer medium to a colder medium. Heat exchangers are devices to facilitate this heat transfer with the highest possible efficiency. A good heat exchanger is able to transfer energy (heat) from the hot side to the cold side with small thermal losses and high efficiency.
