Linear Heat Detection How Does

This linear cable can detect a fire anywhere along its entire length and is available in multiple temperatures. Linear Heat Detection (LHD) cable is essentially a two-core cable terminated by an end-of-line resistor (resistance varies with application). The two cores are separated by a polymer plastic, that is designed to melt at a specific temperature (commonly 68 °C for building applications), and without which causes the two cores to short.

What are Linear Heat Detectors? | Instrumentation Tools

Linear Heat Detection (LHD) (also known as Linear Detection Wire or Linear Heat Detection Cable or Linear Heat) is a very commonly used method of fire detection. It can detect a fire anywhere along the length of the cable, and can be of lengths in excess of a kilometer. Applications can range from building fire alarm systems to mobile plant machinery .

Linear Heat Detection - Wikipedia

Heat detection devices like linear heat detectors detect heat and not smoke. These type of detection devices are ideal in areas where other means of detection could be damaged or inefficient. There are several types of heat detection devices. Linear Heat Detection (LHD) uses a wire or cable instead of a thermostat to detect heat from fire.

What is Linear Heat Detection? - Fire Systems, Inc.

Linear heat detection can be used to detect a buildup of heat or fire in the mechanical workings of an escalator. In many countries the use of heat sensing cable is mandatory. Linear heat detection provides early detection of fire conditions or overheating of equipment, plant or the surrounding area. Signaline linear heat detection cables are conventional heat detectors in a linear form. They sense heat anywhere along their length and are designed to be used in commercial and industrial applications.

Signaline Linear Heat Detection - Vimpex

The cable creates a closed contact that can be monitored by a fire alarm control panel. Therefore, Signaline FT, FT-R and FT-X linear heat detectors can be connected to a conventional fire control panel via a Signaline UCB (Universal Connector Box).

Linear heat detection cables combine advanced polymer and digital technologies that can detect heat conditions anywhere along the length of the cable. The cable is comprised of two zinc-coated spring steel conductors, individually

coated with a heat-sensitive thermoplastic polymer engineered to melt at fixed temperatures.

How Does Linear Heat Detection Work? When the temperature around the cable reaches pre-alarm temperature the control module triggers a warning, giving the user time to investigate and take any necessary action. The control module will only trigger full alarm when the temperature reaches a specified alarm point.
