Introduction To Ethology The Biology

Ethology is the study of animal behaviors in a natural environment. This is opposed to behaviorism, where they study trained animals in lab environments. Behaviorism also doesn't focus on the evolutionary aspects, since they're in a lab environment. Ethologists will view the behavior and examine them from an evolutionary perspective, looking for clues towards adaptations.

Introduction To Ethology The Biology Of Behavior ...

Ethology is the scientific and objective study of animal behaviour, usually with a focus on behaviour under natural conditions, and viewing behaviour as an evolutionarily adaptive trait. Ethology is a branch of zoology concerned with the study of animal behavior. Ethologists take a comparative approach, studying behaviors ranging from kinship, cooperation, and parental investment, to conflict, sexual selection, and aggression across a variety of species.

Animal behaviour: Introduction to Ethology

Ethology combines laboratory and field science, with a strong relation to some other disciplines such as neuroanatomy, ecology, and evolutionary biology. Ethologists typically show interest in a behavioural process rather than in a particular animal group, [4] and often study one type of behaviour, such as aggression , in a number of unrelated species.

Introduction To Ethology The Biology Of Behavior

The aim of this book is to provide a brief, but reasonably comprehensive, introduction to the study of animal behaviour. It has grown out of my earlier book,An Introduction to Ethology, which was published 12 years ago and has been out of print for some time.

Essentials of Animal Behaviour

Ecology is the study of the interactions of living organisms with their environment. Within the discipline of ecology, researchers work at four specific levels, sometimes discretely and sometimes with overlap. These levels are organism, population, community, and ecosystem. In ecology, ecosystems are composed of dynamically-interacting parts, which include organisms, the communities they comprise, and the non-living (abiotic) components of their environment.

That the expression of behaviour is critical to animal biology and ecology, and that behaviours can be expressed through a diversity of mechanisms, is broadly assumed and unquestioned. In coping with social and environmental challenges, animals of diverse taxonomic affiliations express a broad array of behaviours, altering short-term performance, long-term fitness and evolutionary trajectories (Westneat and Fox 2010).
