The Colouring, Bronzing and Patination of Metals: A Manual ...

Chemical coloring of metals is the process of changing the color of metal surfaces with different chemical solutions.. The chemical coloring of metals can be split into two types: electroplating - coating the metal surface with another metal using electrolysis.; patination - chemically reacting the metal surface to form a colored oxide or salt.; Chemically coloring a metal is distinct from ...

Chemical coloring of metals - Wikipedia

Patination composition varies with the reacted elements and these will determine the color of the patina. For copper alloys, such as bronze, exposure to chlorides leads to green, while sulfur compounds (such as " liver of sulfur ") tend to brown.
