"The struggle from late youth on, with and without God, agony, narcotics and love is a torment rarely recorded with such sustained eloquence and passion as you will find in this collection." --Fanny Howe This highly-anticipated debut boldly confronts addiction and courses the strenuous path of recovery, beginning in the wilds of the mind. Poems confront craving, control, the constant battle of alcoholism and sobriety, and the questioning of the self and its instincts within the context of this never-ending fight. From "Stop Me If You've Heard This One Before" Sometimes you just have to leave whatever's real to you, you have to clomp through fields and kick the caps off all the toadstools. Sometimes you have to march all the way to Galilee or the literal foot of God himself before you realize you've already passed the place where you were supposed to die. I can no longer remember the being afraid, only that it came to an end. Kaveh Akbar is the founding editor of Divedapper. His poems appear recently or soon in The New Yorker, Poetry, APR, Tin House, Ploughshares, PBS NewsHour, and elsewhere. The book treats the subject both from an extrinsic and an intrinsic view point. The first chapters give a historical overview of the field and contain an introduction to basic concepts such as manifolds and smooth maps, vector fields and flows, and Lie groups, leading up to the theorem of Frobenius. Subsequent chapters deal with the Levi-Civita connection, geodesics, the Riemann curvature tensor, a proof of the Cartan-Ambrose-Hicks theorem, as well as applications to flat spaces, symmetric spaces, and constant curvature manifolds. Also included are sections about manifolds with nonpositive sectional curvature, the Ricci tensor, the scalar curvature, and the Weyl tensor. injectivity radius, the group of isometries and the Myers-Steenrod theorem, and Donaldson's differential geometric approach to Lie algebra theory.

### **Precalculus**

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus
