Step 1 – Find the transfer function of block diagram by considering one input at a time and make the remaining inputs as zero. Step 2 – Repeat step 1 for remaining inputs. Step 3 – Get the overall transfer function by adding all those transfer functions. The block diagram reduction process takes more time for complicated systems. Because, we have to draw the (partially simplified) block diagram after each step.

It is not always convenient to derive the entire transfer function of a complex control system in a single function. It is easier and better to derive the transfer function of the control element connected to the system, separately.

Block Diagram Representation of Electrical Systems. In this section, let us represent an electrical system with a block diagram. Electrical systems contain mainly three basic elements — resistor, inductor and capacitor. Consider a series of RLC circuit as shown in the following figure. Where, $V_i(t)$ and $V_o(t)$ are the input and output voltages. Let $i(t)$ be the current passing through the circuit.
