High Impulse Voltage And Current

Introduction. Equipment to be installed in electric power-transmission and distribution systems must pass acceptance tests with standardized high-voltage or high-current test impulses which simulate the stress on the insulation caused by external lightning discharges and switching operations in the grid. High impulse voltages and currents are also used in many other fields of science and engineering for various applications.

Lightning discharges involve both high voltage impulses and high current impulses on transmission lines. Protective gear like surge diverters have to discharge the lightning currents without damage. Therefore, generation of impulse currents waveforms of high magnitude (≈ 100 kA peak) find application in test work as well as in basic research on non-linear resistors.

Generation of Impulse Currents Waves | Definition ...

□ Multiplier circuit is a circuit to generate very high d.c voltages from single supply transformers by extending the simple voltage doubler circuits. □ This is simple and compact when the load current requirement is less than one milliampere, such as for cathode ray tubes, etc. □ Multiplier Circuits are designed to overcome the difficulties in higher voltage generation using cascaded voltage multiplier circuits which require too many supply and isolating transformers.

HIGH VOLTAGE ENGINEERING UNIT-III GENERATION OF HIGH ...

An impulse generator is an electrical apparatus which produces very short high-voltage or high-current surges. Such devices can be classified into two types: impulse voltage generators and impulse current generators. High impulse voltages are used to test the strength of electric power equipment against lightning and switching surges. Also, steep-front impulse voltages are sometimes used in nuclear physics experiments. High impulse currents are needed not only for tests on equipment such as high
