Silicone is the slipperiest of all lubricants, so it's a great choice for items that slide against one another. Silicone repels water, but not water vapor, so you can use it to dry out electrical connectors. But don't rely on it as a sealant in humid conditions. Use silicone to lubricate metal, wood, rubber and plastic.

Automotive Lubricants (DIY) | Family Handyman

A Primer on the Auto Lubricating System The first thing we need to understand is the mechanics of the automotive lubricating system. The system is designed to deliver clean oil to each individual component in the engine. It does this by first pulling the oil from the sump (oil pan) and into the pump.

It's easy to make! Just mix up a solution that's 90% vegetable oil and 10% acetone, and squirt it wherever necessary. Be careful when mixing, as acetone is flammable, and will melt many plastic containers. If possible, use a glass or metal container to mix it, or

buy an oil can to make things even easier.

4 Types of Lubricants and How to Use Them | Make:

Oil and Grease Additives Lubricants are a combination of the base oil and the additives and the specific combination depends on the properties of both. Examples: Gear oils need antiwear or EP additives. Turbine oils need good demulsibility while wheel bearing greases need emulsibility. Oils that operate over a wide temperature range need VI improvers.

Lubricants and Lubrication - from the Well to the Applications

Lithium greases are by far the most common of all greases and represent more than half of all greases used. Initially, lithium stearate was the most popular grease on the market, but it is being supplanted by lithium 12-hydroxystearate. The hydroxystearate soap imparts a higher dropping point.
