Leukemia: ALL vs. AML - WebMD

Acute myeloid leukaemia (AML) is a type of blood cancer that starts from young white blood cells called

granulocytes or monocytes in the bone marrow. Adults and children can get it, but it is most often diagnosed in older people. Chemotherapy is the main treatment, you might also have a bone marrow or stem cell transplant.

Acute myeloid leukaemia (AML) - Cancer Research UK

The 2 main types of white blood cells are: lymphocytes - which fight viral infections. myeloid cells - which do different things, such as fighting bacterial infections, defending the body against parasites and preventing the spread of ...

Acute myeloid leukaemia - NHS

Acute myeloid leukaemia (also called

AML or AML leukemia) is a rare cancer of the blood cells. It is an acute leukaemia and can cause symptoms very quickly. It usually needs to be treated as soon as possible after diagnosis. Around 3,100 people in the UK are diagnosed with AML each year.

Acute myeloid leukaemia (AML) - Macmillan Cancer Support

Acute lymphoblastic leukaemia (also called ALL or ALL leukemia) is a rare cancer of the blood cells. It is an acute leukaemia and can cause symptoms very quickly. It usually needs to be treated as soon as possible after diagnosis. Around 800 people in the UK are diagnosed with ALL each year.

Acute lymphoblastic leukaemia (ALL) - Macmillan Cancer Support

Acute myeloid leukaemia (AML) is a type of cancer that affects the blood and bone marrow. AML is not a single disease. It is the name given to a group of leukaemias that develop in the myeloid cell line in the bone marrow. Myeloid cells are red blood cells, platelets and all white blood cells excluding lymphocytes.

Acute myeloid leukemia (AML) - Leukaemia Foundation

Acute myeloid leukemia (AML) starts in the bone marrow (the soft inner part of certain bones, where new blood cells are made), but most often it quickly moves into

the blood, as well. It can sometimes spread to other parts of the body including the lymph nodes, liver, spleen, central nervous system (brain and spinal cord), and testicles.

What Is Acute Myeloid Leukemia (AML)? | What Is AML?

Acute myeloid leukemia (AML) is a cancer of the myeloid line of blood cells, characterized by the rapid growth of abnormal cells that build up in the bone marrow and blood and interfere with normal blood cell production. Symptoms may include feeling tired, shortness of breath, easy bruising and bleeding, and increased risk of infection.

Acute myeloid leukemia - Wikipedia

Acute lymphocytic leukemia (ALL) is also called acute lymphoblastic leukemia. "Acute" means that the leukemia can progress quickly, and if not treated, would probably be fatal within a few months. "Lymphocytic" means it develops from early (immature) forms of lymphocytes, a type of white blood cell.

What Is Acute Lymphocytic Leukemia (ALL)? | Acute ...

Acute leukemia is a malignant neoplastic disease that arises from either the lymphoid cell line (acute lymphoblastic/lymphocytic /lymphoid leukemia, ALL) or the myeloid cell line (acute

myeloid/myelogenous/myelocytic leukemia, AML). ALL is the most common childhood malignancy, whereas AML primarily affects adults.

affects the bone marrow and blood. It's known by a variety of names, including acute myelogenous leukemia and acute non-lymphocytic...

Acute leukemia - Knowledge for medical students and physicians

Acute myelogenous leukemia (AML) is a cancer of the blood and bone marrow — the spongy tissue inside bones where blood cells are made. The word "acute" in acute myelogenous leukemia denotes the disease's rapid progression.
