lopeners Math Tricks Teaching Plan

This is a quick way to multiply two-digit numbers by 11 in your head. Separate the two digits in your mind. Add the two digits together. Place the number from Step 2 between the two digits. If the number from Step 2 is greater than 9, put the one's digit in the space and carry the ten's digit. Examples: $72 \times 11 = 792$.

Step One: Introduce Ratios. Demonstrate to students the concept of using ratios to compare objects. Begin by providing objects for

students on a table in the front of the room or at students' desks to compare during a whole class discussion (for example, rulers and pencils, erasers and markers, etc.). Ask students to count the number of each object, and demonstrate how to write ratios to compare the quantities of the objects using the following formats:
